**Notice of Proposed Corrective Action Plan, for the
remediation of soil and groundwater contamination**

at the following site: Former Hoover's Super Service
6201 North State Street
Calpella, CA
Case No. 1TMC064

Comment Period ends September 10, 2007

Problem Description

Prior fueling operations at 6201 North State Street in Calpella, at the northeast corner of State Street and Moore Street, resulted in the release of petroleum products to soil and groundwater. The extent of the contamination, which includes the gasoline additive MTBE, has been investigated through the installation of soil borings and groundwater monitoring wells. Groundwater at the site has been found to flow generally to the southeast. Some impact has been found on the south side of Moore Street.

Proposed Corrective Action

Dual phase extraction has been proposed for remediating the site. Dual phase extraction combines soil vapor extraction, which involves the use of a vacuum system to pull volatile contaminants out of the soil, and groundwater extraction. Extracted vapor and groundwater would be treated to remove contaminants. Trenches would be dug at the site to install the extraction systems.

Additional investigation is also proposed to delineate the extent of contamination south of Moore Street. Depending on the results of that investigation, remediation efforts could be extended there.

North Coast Regional Water Quality Control Board staff intends to concur with the proposed action without further notice unless significant public comment is received by September 10, 2007. Please contact Craig Hunt at (707) 570-3767 or at CHunt@waterboards.ca.gov with any questions or comments regarding this project. You may also submit written comments to:
